# HELPING METALWORKERS ACHIEVE GREATNESS

WALTER was created thanks to a man's will to help. Walter Somers, a mechanical engineer from Germany arrived in Canada in 1939 when World War II started. After noticing Canadian workers' limited tooling and training, he saw the opportunity to contribute to greater industrial successes.

In 1952, WALTER Surface Technologies was founded driven by a will to outperform and improve productivity. The WALTER team visited end users one by one to help them work better. This unique customer-centric approach provided significant and measurable improvements to metalworkers output and set WALTER apart.

At WALTER, we believe that everyone has the potential to build, fabricate, construct, finish and erect great projects. With safe tools, productive consumables and the right recommendations, workers are enabled to do better work. We provide the means to achieve greatness through three pillars: productivity, safety and customer experience.

We help our customers achieve greatness by asking ourselves every day: how can we help them work better? It's the only question that matters and the reason why we exist.

At WALTER, we help our customers Achieve Greatness™.

# SPOTLESS

ANDREW OVERING  
FOREMAN & TECHNICAL SUPERVISOR

“

**Stainless steel is a very difficult material to work with. Working with the right tools is crucial to making sure that all of our tanks come out spotless.**

”

Andrew has always been a very curious person. From an early age, he's been fascinated by how things are put together. Not surprisingly, his favorite toys were Legos and K'nex.

One day he met a welder. He immediately found his calling as he watched the metalworker form, cut, and join. Within 3 weeks, he was registered at his local trade school. After completing the program, he accepted a welding job at a newly opened tanker manufacturer, and he's been working there ever since.

Sixteen years later, Andrew has learned and mastered every single process in the tanker industry. He's the go-to person for technical assistance. He enjoys «teaching others various methods, as well as sharing tips and tricks that you might not have learned in school. I'm always willing to help people».

He is now the shop's foreman. He loves his job, and it shows. Cutting corners is not an option for him. «Stainless steel is a very difficult material to work with. Working with the right tools is crucial to making sure that all our tanks come out of here spotless». He's also responsible for signing off on every tank. «I consider myself a perfectionist. I will always try to outdo my last tank and I make sure that everybody else that works with me follows the same desire to do better every single time».

His motto is “I can fix just about anything that is broken». This also applies to his hobbies outside of work. He has renovated his house by himself and hasn't paid a mechanic to repair his cars in over ten years.

Getting an impeccable finish on tanks is not an easy feat. According to Andrew, using the right tools is key: “When it comes to abrasive work, you want to do as little manual labor as possible. A long day of grinding can be hard on your hands and hard on your back. The better your tool is, the faster you're going to remove material and the better your product is going to be”. Andrew wants to continue repairing and building tanks. «It's such a rewarding industry that I don't picture myself anywhere else».

Perhaps a new generation of tank builders is in the works. His 3-year-old is always on the lookout for large tanks when in the car with his dad. Andrew always makes sure to say, “daddy built this!” when seeing a tank on the road. That's how proud Andrew Overing is of what he does. To him, they are more than just tankers, they are pieces of art.

# SAFETY FIRST

## Tips on the safest and most effective use of abrasives and power tools\*

- Disconnect the power tool prior to changing abrasives.
- Inspect the abrasive for any sign of damage. Do not use if damaged.
- Check MAX. RPM on abrasive and check the spindle speed of the tool. Never run an abrasive faster than its MAX. RPM (or M.R.S. = Maximum Rated Speed).
- Mounting: Use only approved mounting hardware for the abrasive at hand. Above all, the clamping hardware must center the wheel securely and provide the required support to the abrasive.
- Abrasives must be used with safety guards in place as indicated on the label. Adjust guards to protect the operator.

- Always wear eye protection. Wear face, body, ear and dust inhalation protection as needed.
- Practice safe working methods: Secure the workpiece, hold the tool firmly, avoid cluttered and badly lit work areas.
- Ensure adequate protection of other workers in the vicinity.
- Do not use abrasives and tools over their rated capacity, follow manufacturer's instructions.
- Service power tools regularly and according to manufacturer's instructions to keep them in good working condition and maintain their performance. Do not use if damaged.

\*WALTER abrasives are designed for use as directed in all applicable safety codes, such as CSA, WHMIS, ANSI, OSHA and other regulatory bodies. Always work within these applicable rules and regulations.

## SAFEST AND MOST EFFECTIVE WORK METHODS

### GRINDING

Type 27 depressed center grinding wheels are designed to be used at a 15° to 20° working angle.

### FLEXCUT

FLEXCUT flexible grinding wheels are best used with a working angle of 10° to 15°.

### FLAP DISCS

Flap discs are designed to be used at a working angle of 4° to 10°. Never use flat.

### SANDING DISCS

Fiber backed sanding discs work best at a working angle of 4° to 10°. They must be used on a full size flexible backing pad.

### CUT-OFF WHEELS

Choose direction of cut to present the narrowest cross section of the material to the wheel. Cut large solids with a moderate rocking motion. Avoid twisting and bending of the wheel in the cut. Do not use a cut-off wheel for deburring unless otherwise specified.

### FLAP WHEELS

Apply moderate working pressure when working with flap wheels – let the tips of the flaps do the work.

### WIRE BRUSHES

Work with the face of a wire brush. Apply moderate working pressure to let the wire tips do the work and prevent excessive bending of the wire.

## STORAGE TIPS FOR ABRASIVE PRODUCTS

- Keep abrasives in their original packaging, to protect them from water and excessive heat.
- Coated abrasives, such as fiber discs, flap discs and cloth belts perform best when stored in an area with 50% humidity at 22 °C (70 °F).

## SAFETY SEMINAR

WALTER offers free in-plant safety seminars to promote the safe use of abrasives. Reserve your safety seminar today by calling: **1-888-592-5837**. For more information, visit [walter.com/safety](http://walter.com/safety)

### California Proposition 65 Warning

The products identified with this symbol can expose you to chemicals that are known to the State of California to cause cancer and/or reproductive harm. For more information, go to [www.P65Warnings.ca.gov](http://www.P65Warnings.ca.gov) or [www.walter.com](http://www.walter.com)

### Volatile Organic Compounds Free

Consumers today are far more knowledgeable regarding products containing potentially toxic levels of volatile organic compounds, commonly known as VOCs. Paints, stains, and varnishes have long contributed considerably to the prolific release of VOCs, sometimes known as off-gassing. This explains the growing popularity of low-VOC and VOC-free products. Products where you see the VOC-free logo guarantee that they contain no volatile organic compounds.

### Nonfood Compounds Program

The global food industry relies upon nonfood compounds to facilitate the efficient processing, handling and storage of food throughout the supply chain. Nonfood compounds include such substances as cleaners, sanitizers, boiler compounds and lubricants. NSF International Nonfood Compounds Registration Program provides beneficial product information to three important stakeholder groups.

## WELDING

# SURFOX WELD CLEANING

**SURFOX is a safe, effective and fast electrochemical weld cleaning system.**

- ▷ Fast and uniform weld cleaning
- ▷ Guaranteed passivation
- ▷ NSF registered solutions
- ▷ Minimal PPE Requirements
- ▷ SURFOX Systems meet ASTM standards to guarantee passivation of workpieces
- ▷ Third-party certified to meet ASTM standards for passivation

## Why is passivation important?

Stainless steel can resist corrosion thanks to a passive chromium oxide layer that forms on its surface. The formation of this protective layer is called passivation.

Passivation occurs when the chromium contained in the stainless steel meets the oxygen in the air. This chemical reaction forms a passive chromium oxide layer, which will protect the surface of stainless steel. Mechanical abrasion, thermal treatment, welding, salt, strong acids, and galvanic contamination will destroy this protective layer and expose the metal to corrosion. To fully restore the corrosion resistance of stainless steel and avoid any interference in the passivation process, the heat tint as well as other surface contaminants must be removed.

# PASSIVATION MEASUREMENTS

## SURFOX™ SURFACE MEASURING SYSTEM

Quickly and easily guarantee passivated stainless steel

The importance of validating the passivation of your stainless steel surfaces cannot be stressed enough. Impossible to detect with the naked eye, passivation indicates that the protective layer of chromium oxide exists on your stainless steel surface – the essential ingredient that guarantees your stainless steel will resist corrosion.

The SURFOX™ Passivation Tester is a simple, compact and portable testing device that allows you to quickly and easily ensure passivation of stainless steel anywhere, anytime – even on job sites!

### Applications

- ▷ Determine the degree of passivation of stainless steel 304 & 316
- ▷ Testing device for passivation

### Features

- ▷ Small probe allows testing in hard to reach areas
- ▷ Measures the protective chromium passive layer on stainless steel surfaces
- ▷ Based on a technology called “open circuit potential”
- ▷ A value above zero indicates the surface is passivated
- ▷ Minimizes costly downtime caused by the rework of pieces
- ▷ Provides an instant reading to verify the quality of the protective layer

### Tech tips!

- Use on a clean surface

# ANTI-SPATTER SOLUTIONS

## Why use anti-spatter solutions?

When small pieces of molten metal fly off the welding arc, the spatter, or slag, lands on weld surfaces around seams. As it cools and hardens on the surface on which it lands, it can be difficult to remove. Abrasives or chisels will then need to be utilized to remove the spatter to ensure a smooth surface for finishing the workpiece. However, by leveraging an anti-spatter solution before you begin welding, you can eliminate the time and cost of using abrasives or tools to remove weld spatter.

## Why use WALTER E-Weld and Spatter Block anti-spatter solutions?

WALTER has developed a **safer and healthier** line of **anti-spatter solutions** to prevent spatter from adhering to

surfaces. Our anti-spatter solutions are **biodegradable, non-flammable and non toxic** so that you can improve your work process without sacrificing worker health and safety.

# CUTTING TABLE PROTECTION

## E-WELD PLASMA™

Long lasting protection for laser and plasma cutting tables

E-WELD Plasma™ is a ceramic anti-spatter solution that is applied to laser and plasma cutting tables to reduce the buildup of slag over time.

This simple preventative measure keeps the slag from adhering to the slats in cutting tables, allowing it to be easily removed before it builds up and becomes problematic. This significantly decreases the amount of time and effort needed to clean slag off cutting tables, which saves you a great deal of labor time – and associated costs – in plant maintenance.

**Now compatible with wet tables.**

### Tech tip!

Stack multiple cutting tables behind one another and slightly offset them from one another so all the slats on each table are exposed. This will allow you to coat multiple cutting tables at once, saving even more time.

### Benefits

- ▷ Greatly reduces the amount of time required to remove slag from cutting tables
- ▷ Spend less time on equipment maintenance and more time on revenue generating activities
- ▷ Can also be applied to other equipment that is exposed to weld spatter or slag
- ▷ Spray gun applicator dispenses a thin, even layer to help prevent wasteful over application
- ▷ Can be applied to wet or dry cutting tables

### Features

- ▷ Ceramic formula provides long lasting protection, even in the presence of extreme heat
- ▷ Spray gun applicator allows you to quickly and easily dispense the product across large surface areas
- ▷ Each 10 kg (22 lbs) container provides enough antispatter to cover 50-100 m<sup>2</sup> (538-1076 ft<sup>2</sup>)
- ▷ E-WELD Plasma can be painted on manually or sprayed on with the applicator; just stir the solution prior to use
- ▷ Use a degreaser like SURFOX Pre-Weld to clean slats prior to use to ensure a strong, adhesive coating

# NOZZLE PROTECTION

## E-WELD NOZZLE™

Ceramic nozzle spray for up to 8 hours of protection

Extend the life of welding nozzles and reduce downtime spent scraping out spatter with E-WELD Nozzle™. This highly concentrated anti-spatter evenly coats the exterior and interior surface of your welding nozzle to prevent spatter from adhering to the nozzle. This prevents obstructions and allows the gas to flow freely, resulting in a higher quality weld. This is an extremely economical solution, as the easy applicator dispenses a thin layer that can provide protection for up to 8 hours. This is an ideal solution for MIG welding, plasma cutting and laser cutting as the E-WELD Nozzle™ can withstand high temperatures (up to 1000° C) and reduce your consumable spend.

- ▷ *No weld contamination*
- ▷ *Helps prevent weld porosity*
- ▷ *No time lost on scraping spatter from nozzle prior to welding*
- ▷ *Improves weld quality and reduces rejection rate*
- ▷ *Only a thin layer needed (up to 100 applications per can)*
- ▷ *Superior life and more solution per can compared to competitive products*

**Unique self-dispensing applicator easily dispenses highly concentrated ceramic coating**

## RECOMMENDED BY TYPE OF USAGE

Our **Enduro-Flex** flap discs feature trimmable backings made with our proprietary ECO-TRIM wood fiber backing material. When the flaps wear down to the outer diameter of the backing, trim away 1/4" of the backing at a time (up to three times total) to expose fresh abrasive grain, extending disc life and giving you a fresh new cutting edge.

### Tech tip!

**SPEED** To ensure the longest life and best performance, use at optimal speed of 4,000 to 6,000 RPM.

**PRESSURE** More pressure will increase removal rate while less pressure will improve the surface finish.

**WORKING ANGLE** For best performance, always use at a working angle of 4° to 10°. Never use flat.

## ERGOFLEX™

When employee safety and ergonomics are top priorities

ERGOFLEX™ is an abrasive that combines our proprietary Cyclone™ Technology grain blend with a Type 29 disc design to provide a solution for professionals looking to maximize workplace safety and ergonomics without sacrificing productivity. These wheels allow for a more comfortable working angle than Type 27 depressed center grinding wheels while minimizing the amount of noise and dust created during weld blending operations. The aggressive 36 grit abrasive grain blend also removes material quickly, allowing you to strike a perfect balance between comfort, safety and productivity.

- Advanced Cyclone™ Technology abrasive grain blend removes material fast for improved productivity
- Designed for extremely smooth, comfortable blending of both flat and curved surfaces
- Reduces the amount of dust generated by 95% compared to traditional grinding wheels
- Reduces the level of noise generated by 50% compared to a traditional grinding wheel
- Less risk of gouging compared to traditional grinding wheels

## BRUSHING

# HIGH PERFORMANCE POWER BRUSHES

**Power brushes have long been used** for edge and surface conditioning on a wide variety of materials. Unlike grinding wheels and other abrasives that remove base material along with surface contaminants, power brushes work on the metal surface without removing the base material. The tips of the wire hammer the metal surface like thousands of tiny ball peens to finish and work the surface.

To withstand that kind of abuse, every WALTER power brush is made from only the finest industrial grade materials. Combined with the latest manufacturing technology and strictest quality control, every power brush is designed to guarantee the highest productivity, longest brush life and maximum operator safety.

## Perfect Balance

*Every knot is perfectly balanced through an accurate wire count and an even trim length before being permanently anchored in an individual hole. This ensures perfect concentricity and vibration-free brushing for maximum operator comfort.*

*Internal steel plate holds wires securely in place even under extreme pressure for maximum strength and safety.*

## Longest Life

Premium high tensile wire is oil-hardened and tempered for the longest life. Wire quality is mill certified for every batch, ensuring consistent performance brush after brush.

### Color coded hubs for easy identification

#### Hub color    Wire type

Made with premium carbon steel wire that is oil hardened and tempered for longest life and maximum brushing action.

Made with 304 stainless steel wire to help prevent contamination and surface rusting of brushed stainless steel parts. Also may be used on aluminum and other non-ferrous metals.

► Knot-twisted brushes are for surface cleaning after welding, to remove scale, spatter, rust and corrosion

## SAUCER-CUP BRUSHES

For cleaning hard-to-reach areas

These brushes have a built-in working angle of 45° to clean surfaces in hard-to-reach areas such as inside corners, edges and contours. Knot-twisted brushes are tightly knotted to remove surface imperfections quickly and ensure a long, productive lifespan. Crimped brushes provide excellent cleaning on uneven surfaces.

► For surface cleaning such as removing paint, rust and corrosion

► Tightly knotted for maximum impact and long brush life (knot-twisted only)

Note: It is very important to know the next step after cleaning. For instance, if painting is required after the cleaning operation, a surface preparation cleaner may be recommended.

Inorganic contaminant: Mineral-based compounds such as rust, limescale, etc.

Organic contaminants: Carbon-based compounds such as oil, grease, etc.

Other contaminants: Can be a combination of organic and inorganic contaminants

**Neutralization** of acidic cleaners: Proper neutralization with an alkaline cleaner is always required to deactivate the acid and prevent damages to the parent material

Steps to proper **neutralization**:

1. Wipe off the excess of acid
2. Apply an alkaline cleaner
3. Wipe off the surface with a clean rag (rinse and dry when necessary)

## WALTER PRODUCTS LEGEND

### Volatile Organic Compounds Free

Consumers today are far more knowledgeable regarding products containing potentially toxic levels of volatile organic compounds, commonly known as VOCs. Paints, stains, and varnishes have long contributed considerably to the prolific release of VOCs, sometimes known as off-gassing. This explains the growing popularity of low-VOC and VOC-free products. Products where you see the VOC-free logo guarantee that they contain no volatile organic compounds.

### Non-Flammable

Safe for use in environments where flames or sparks are present.

### Nonfood Compounds Program

The global food industry relies upon nonfood compounds to facilitate the efficient processing, handling and storage of food throughout the supply chain. Nonfood compounds include such substances as cleaners, sanitizers, boiler compounds and lubricants. NSF International Nonfood Compounds Registration Program provides beneficial product information to three important stakeholder groups.

### Low Energy Surfactant (LES) technology

These unique surfactants can clean and degrease effectively at lower temperatures, thus generating substantial energy savings. Lower the temperature of your automated industrial parts washers today! NOTE: Dilution up to 1:200

# WALTER VOC GUIDE

To reduce ground-level ozone and smog, certain U.S. states regulate the sales of volatile organic compounds (VOC) in consumer and industrial products. The goal is to decrease the use of high-VOC products in consumer, commercial, and industrial applications and incentivize suppliers to create lower-VOC alternatives.

WALTER offers powerful solutions for industrial applications. Whenever possible, we offer low-VOC or VOC-free alternatives to replace high-VOC products. For example, we use compressed air as an alternative to high-VOC propellants for some of our aerosol solutions.

We are committed to keeping our customers informed of any restrictions on the use of our products. Below, you'll find a list of our products and the states that restrict their use in some applications.

All states provide exemptions for high-VOC products used in the manufacturing process. Contact your local air quality regulators to learn more about VOC restrictions that may apply in your state or county.

# SAFETY FIRST

## Tips on the Safest and Most Effective Use of Cutting Tools\*

- ▷ Disconnect the power tool prior to changing cutting tools.
- ▷ Keep cutting tools sharp and clean to prevent injuries and for best performance.
- ▷ Inspect the cutting tool for any sign of damage. Do not use if damaged.
- ▷ Mounting: Use only approved mounting hardware for the cutting tools. The chuck must center the cutting tool securely and provide the required support.
- ▷ Use mounting straps or a permanent magnet design when using a magnetic drill vertically. This prevents it from falling during power interruptions.
- ▷ When possible, drilling guards should be used to protect the operator.
- ▷ Always wear eye protection. Wear head, hand, ear and dust inhalation protection as needed.
- ▷ Practice safe working methods: always secure the workpiece being drilled to prevent movement, hold the tool firmly, avoid cluttered and badly lit work areas.
- ▷ Ensure adequate protection of other workers in the vicinity.
- ▷ Do not use cutting tools over their rated capacity, follow manufacturer's instructions.
- ▷ Service power tools regularly and according to manufacturer's instructions to keep them in good working condition and maintain their performance. Do not use if damaged.

### ***Safest and Most Effective Work Methods***

## Pro Tips: Maximize Drilling Efficiency

### Select the proper feed rate.

It will impact the rate of material removal, power requirements, and surface finish.

$$\text{SFM} = D \times \text{RPM} \times .262$$

SFM = Surface Feet per Minute  
D = Drill Diameter

### Use the correct RPM speed

it has the greatest influence on performance.

$$\text{RPM} = \frac{\text{SFM} \times 3.82}{D}$$

### Reduce friction, prevent tool wear and breakage

by using cutting lubricants.  
Increase up to 5 times the life of your tools with COOLCUT™ Cutting Lubricants

### Remember this rule:

Small diameter bits = **High speed, low feed**

Large diameter bits = **Low speed, high feed**

| THUNDERBIT®   | GENERAL PURPOSE |

## MATERIAL

### High Speed Steel (HSS)

The most commonly used tool material for general purpose drilling. Suitable for most materials, including low to medium strength steels, aluminum and other non-ferrous materials, as well as wood and plastic.

### Cobalt (HSCo)

This composition increases tool "hardness" and improves "wear resistance" making it a great option for drilling into harder steel as well as stainless steel grades.

### Carbide (C)

Carbide tools are designed for very hard and very tough to machine materials. Carbide drills are more brittle than HSS or HSCo drills, and should only be used for production drilling in stationary equipment. They are not recommended for use in hand held portable drills.

### Why it's important?

It's important to select the correct material of the drill bit based on your application to maximize performance.

## DRILL POINT STYLE

### Conventional

Most commonly used drill point. Ideal for a wide variety of materials.

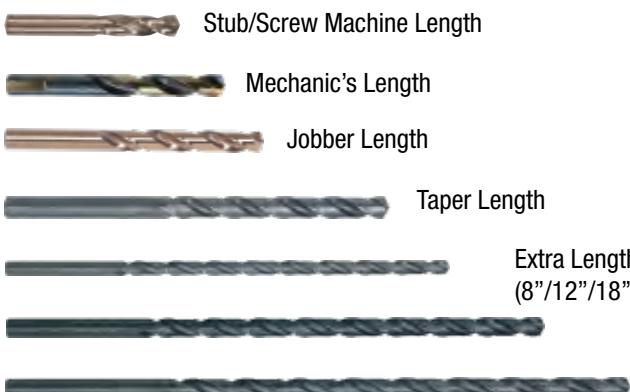

### Split Point

Designed to drill in hard and soft materials, it reduces "walking", lifts away debris, allowing you to drill holes faster and with less chance of breakage. Ideal for curved surfaces.

## DRILL LENGTH

## FINISH AND COATING

### Bright Finish

Can be used on low-carbon steel and aluminum.

### Black Oxide

More lubricity than bright finish. Resists corrosion and oxidation with an added heat treatment that reduces friction.

### Black and Gold

Better resistance to corrosion and breakage while increasing lubricity. Reduces chipping and flaking. Can be used on most materials.

### Titanium Nitride Coated (TiN)

A wear resistant gold colored, all-purpose ceramic coating provides high hardness, low coefficient of friction and thermal barrier. Tool life may be extended 500% or more in high wear or very abrasive drilling applications.

### Bronze

Will increase lubricity and bit life while reducing chip build-up. For performance on harder metals and stainless steel. Applied primarily to Cobalt drills.

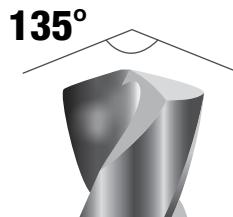

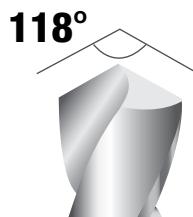

## DRILL POINT ANGLE

### 118°

Ideal for cutting mild steel, aluminum, and free machining materials.

### 135°

Ideal for drilling into more difficult to machine materials, such as stainless steel, hardened steels, cast iron and more. For CNC or hand drilling applications.

### Why it's important?

- ▷ The shorter the bit, the more suitable they are for applications that require precision and accuracy.
- ▷ The shorter the bit the more rigid it is.
- ▷ Ensure you use the right flute length to get the chips completely out of the hole.

# DRILL BIT SELECTION

01

DRILLS

## SECTION 1 – DRILL BIT MATERIAL AND GEOMETRY

*Increasing Hardness*

### High-Speed Steel (HSS) M2

High-speed steel, for most drilling applications

Recommended series:  
**200A, 400N, T1, T1B**

### HSS + Cobalt (HSCo) M42

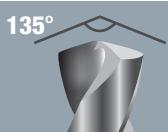

Premium high-speed steel with 8% cobalt for added hardness, suitable for many drilling applications

Recommended series:  
**500, 540, 580, T1HDC, T1C**

### Solid Carbide (SC)

Solid carbide is meant for the toughest materials and is designed to be used in CNC applications

Recommended series:  
**600, 680, 700**

**Use 118°** conventional point for soft materials like aluminum  
Recommended series: 200B, T1B

**Use 135°** split-point for harder materials like steel, or stainless steel  
Recommended series: 400N, T1D, T1HD, T1HDG

## SECTION 2 – DRILL BIT LENGTH

*Shortest*

*Longest*

### Stub or Screw Machine Length

Used in sheet metal and fixed spindle machines.

Recommended series:  
**300A, 300N, T4HD, 300C**

### Mechanics Length

Performs best in handheld drilling applications.

Recommended series:  
**350N, T1M, 1045N**

### Jobber Length

A do-it-all length that can be used in most applications.

Recommended series:  
**400N, T1HD**

### S&D Prentice

Large diameter with a  $\frac{1}{2}$ " reduced shank to be used in  $\frac{1}{2}$ " drill chucks.

Recommended series:  
**1000A, 1000N, T9FHD**

### Aircraft Extension

Long length drill bits, with jobber length flutes for extra reach.

Recommended series:  
**1100, 1200, 1100C, 1200C**

### Extra Length

Long length drill bits, with extra long flutes for deep hole drilling.

Recommended series:  
**1308, 1312, 1318**

## SECTION 3 – POWER TOOL USED

When using a handheld power tool, a 3-flats or hex shank drill bit should be used.

Recommended series:  
**T101D, T1HD+, 350N**

In fixed spindle machines like drill presses, a round shank should be used to reduce the chances of breakage.

## IMPORTANT – TIPS TO GET THE MOST OUT OF YOUR DRILL BIT

**Speed** – Using the optimal RPM for the drill bit diameter and material being drilled will increase productivity.

**Feed** – Using the right pressure and feed rate will optimize the drilling operation and extend drill bit life.

**Lube** – Using lubricant increases drill bit life, and improves chip ejection for a better surface finish on your hole.

# JOBBER LENGTH GENERAL PURPOSE DRILLS

Designed for general purpose drilling under a wide range of drilling condition. It can drill various materials such as cast iron, steel, and steel forging. The surface treatment prevents chip welding, improves chip flow and increases abrasion resistance.

- ▷ 118° Point designed for general use
- ▷ A general purpose jobber for a wide range of applications
- ▷ Black oxide finish improves chip flow and increases abrasion resistance
- ▷ Bright finish recommended for aluminum and other non-ferrous materials

# HEAVY-DUTY JOBBER LENGTH DRILLS

The heavy duty construction affords efficient drilling in medium strength alloy materials. The split point reduces the thrust requirements and minimizes walking. A black oxide surface treatment improves tool life.

- ▷ Heavy-duty 135° Split Point minimizes walking
- ▷ Black oxide surface treatment for increased wear resistance
- ▷ A multi-purpose heavy-duty drill bit

## HEAVY-DUTY JOBBER LENGTH DRILLS

The heavy duty construction with a Thunderbit core and flute design affords efficient portable drilling in medium strength alloy materials. The split point reduces the thrust requirements and minimizes walking. A black and gold surface treatment is applied for superior lubricity.

- ▷ Unique flute design for added strength and improved chip evacuation
- ▷ Black & Gold surface treatment for maximum lubricity

## HEAVY-DUTY JOBBER LENGTH DRILLS

The heavy duty construction affords efficient drilling in medium strength alloy materials. The split point reduces the thrust requirements and minimizes walking. A black and gold surface treatment is applied for superior lubricity.

- ▷ Heavy-duty 135° Split Point minimizes walking
- ▷ Black & Gold surface treatment for high wear resistance and lubricity
- ▷ 3-flats on shank for hand-held power tools

## HEAVY-DUTY JOBBER LENGTH DRILLS

TiN (Titanium Nitride) coated drill bits are used for drilling holes in very hard and tough materials. The gold colored coating excels at evacuating chips due to its high lubricity. The TiN coating is also very resistant to wear and abrasion due to it being extremely hard. This significantly extends the life of the tool in many intense drilling operations. This jobber drill also employs the Thunderbit geometry for increased strength and better resistance to breakage.

- ▷ Unique flute design for added strength and improved chip evacuation
- ▷ The TiN (titanium nitride) coating provides a super hard surface with high lubricity
- ▷ Extended tool life in high wear drilling applications

# HEAVY-DUTY JOBBER LENGTH DRILLS

The TiN (Titanium Nitride) coating provides a super hard surface with high lubricity and longer tool life, as the heat is deflected away from the drill. These drills can be used in a wide range of materials including steel, stainless steel, titanium, nickel and aluminum. TiN coating is applied to the "working" part of the drill. This allows for all of the benefits that the user receives from a fully TiN coated product, but at a reduced price when compared to a drill that is fully coated.

- ▷ *The TiN (titanium nitride) coating provides a super hard surface with high lubricity*
- ▷ *Extended tool life in high wear application*
- ▷ *135° split point for self centering and reduced walking*

## HEAVY-DUTY JOBBER LENGTH DRILLS

The heavy duty construction with a Thunderbit core and flute design affords efficient portable drilling in medium strength alloy materials. The split point reduces the thrust requirements and minimizes walking. A black and gold surface treatment is applied for superior lubricity.

- ▷ Unique flute design for added strength and improved chip evacuation
- ▷ Bronze oxide for maximum lubricity
- ▷ Cobalt substrate permits speeds and feeds up to 30% faster than HSS drill

## MECHANIC'S LENGTH DRILLS

Mechanic's length drills are shorter than standard jobber drills. This allows them to be used in tighter spaces and it also improves their overall toughness and reduces chances for breakage. This is ideal for drilling applications in harder metals like stainless steel. These drills are surface treated for high wear resistance and increased lubricity.

- ▷ Shorter length increases rigidity
- ▷ 135° Split Point reduces walking and improves ease of penetration
- ▷ Black & Gold surface treatment for high wear resistance and lubricity

# SCREW MACHINE LENGTH DRILLS

Screw machine drills (NAS Type C) are shorter than jobbers length drills and are designed for use in drill presses and CNC applications. They can also be used in portable drills when drilling sheet metal.

- ▷ Shorter length increases rigidity
- ▷ Improved drilling in hard metal like stainless
- ▷ 135° Split Point reduces walking and improves ease of penetration
- ▷ NAS Type C

## SCREW MACHINE LENGTH DRILLS

These drill bits (NAS Type C) have short flutes as well as a short overall length for maximum rigidity when drilling in sheet metal. They are made with a cobalt blend to provide a long service life in hard materials such as stainless steel.

- ▷ Shorter length increases rigidity
- ▷ Improved drilling in hard metal like stainless
- ▷ 135° Split Point reduces walking and improves ease of penetration
- ▷ NAS Type C

**S&D****1/2" SHANK DRILLS**

General purpose flute design. All sizes have a 1/2" by 2-1/4" long shank. The maximum overall length is 6" and the flute length is 3". This makes them short drills in the larger sizes and thus well suited to use in portable electric drills equipped with 1/2" chucks. They are highly effective in tough, high tensile strength materials. The 135° split point reduces thrust and eliminates walking at the drill point.

► All sizes are individually packaged

## S&D REDUCED SHANK DRILLS

HSS S&D drills expand the size range capacity of a 1/2" drill chuck. By including a split-point and a 3-flats option, this style of drill is ideal for hand held drilling operations. The split-point reduces walking and the 3-flats keep the tool from rotating in the chuck.

- ▷ 1/2" reduced shank with 3-flats is ideal for hand held power tools
- ▷ Incorporating a reduced shank increases drilling diameter range
- ▷ Split-Point eliminates walking at the drill point

## S&D REDUCED SHANK DRILLS

S&D drills expand the size range capacity of a 1/2" drill chuck. By including a split-point and a 3-flats option, this style of drill is ideal for hand held drilling operations. The split-point reduces walking and the 3-flats keep the tool from rotating in the chuck.

- ▷ 1/2" reduced shank is ideal for hand held power tools
- ▷ Incorporating a reduced shank increases drilling diameter range
- ▷ Split-Point eliminates walking at the drill point
- ▷ Cobalt drills offer speeds and feeds of up to 30% faster than HSS drills
- ▷ All sizes are individually packaged

## REDUCED SHANK S&D DRILL

Expands the size range capacity of a 1/2" portable drill chuck. Common flute and overall length for minimal adjustment during tool changes. Precision ground for high degree of concentricity between shank and body diameter. Ideal for drilling in tough, high tensile strength materials. The 135° split point reduces thrust and eliminates walking at the drill point.

► All sizes are individually packaged

# EXTRA LENGTH DRILLS

## 8" EXTRA LENGTH DRILLS

Because of the inaccessibility or the extreme depth of a hole, it is often found that even long series drills are not long enough. The drilling of such holes generally requires the use of an Extra Length Drill. The drills are made with a general purpose flute design which will perform well under the widest range of operating conditions and materials.

## 1600A SERIES

### CARBIDE TIP

Rotary Percussion & Hammer Drilling,

Round Shank

Fractional / Black & Gold Tipped

1600A

The combination of rotation and percussion helps the drill achieve a cutting and grinding (rotary) action at the same time as a chipping (percussive) action, chipping away at rock to produce a hole. Usually, these motions are hydraulically or pneumatically driven.

## SDS PLUS MASONRY DRILLS

Short head to flute entrance allows debris to quickly channel down the flute for faster drilling progress. Chisel shaped head geometry for faster drilling progress. Self Centering Tip for easy spot drilling. Reinforced flute geometry reduces vibrations, increases breakage resistance, & transfers more energy from power tool motor to tip of the drill bit. Rebar Chamfer prevents carbide head from cracking in the event of contact with reinforced concrete (product not intended for use in reinforced concrete).

# 01 SDS PLUS & SDS MAX MASONRY DRILLS

## DRILLS

The 3-cutting-edge monobloc tip is the solution for all concrete drilling. The self-centering tip provides more precision and this design guarantees a concentric hole. The bit is designed for longer life when drilling in concrete. As an additional benefit, it can crush through and pulverize rebar when drilling in reinforced concrete applications. The square flute accelerates dust extraction and improves the drill bit's lifetime. The reinforced geometry reduces vibrations and transfers more energy from the power tool motor to the tip of the drill bit.

## MASONRY DRILLS REBAR CUTTERS

These cutters are the perfect solution for drilling through concrete embedded rebar! Evacuation zones between the carbide teeth and flutes for optimal dust evacuation. Made from premium grade European Carbide.

For sizes 3/8" – 5/8", rebar cutters come in a single, one-piece design in either Micro SDS+ (Compatible with SDS+ drive systems), or 3-Flat shank.

For sizes 3/4" and above, Drillco rebar cutters come in a two-piece design (Head + Shank Adapter). The adapter is available in Micro SDS+ or 3-Flat Shank, and is interchangeable and reusable with all sizes from 3/4" and above.

- ▷ Cuts through rebar up to 5x faster than an SDS+ multi-cutting drill
- ▷ Eliminates the need to relocate holes to avoid rebar; just drill straight through!
- ▷ Large, unique flute design optimizes debris removal
- ▷ Relief hole for easier chip and heat removal away from the drilling surface

## MULTI-STEP™ DRILLS

### Now with the exclusive ICECUT™ coating

Multi-Step drill bits are the fastest and easiest way to enlarge holes in sheet metal and other materials up to 1/8" thick.

- ▷ Special AlCrN coating provides additional toughness and wear resistance to prolong tooling life, even when compared to titanium based coatings such as TiN or TiAlN
- ▷ 2 wide cylindrical flutes eliminate chip build-up for faster drilling and to produce holes with minimal vibration or distortion
- ▷ Each shank has three flats for easy mounting
- ▷ Spiral fluting is ideal to improve speed when working with cordless power tools
- ▷ Straight fluting is ideal to ensure you get the proper hole size without warping on corded power tools

**Feeds** – Feed rates for drilling are governed by the drill diameter, machinability of materials and depth of hole.

**Speeds** – The speed of a drill is determined by the rate which the outer periphery of the tool rotates in relation to material being cut. In general, the SFM at which a drill will operate is within a range based upon the workpiece material, its condition, hardness and depth of hole. It is usually advisable to start the drilling process at a slower SFM and then increase to the maximum.

$$\text{RPM} = \frac{\text{SFM}}{\text{TD}} \times 3.82 = \text{Revolutions Per Minute}$$

$$\text{SFM} = \text{RPM} \times \text{TD} \times .26 = \text{Surface Feet Per Minute}$$

**TD** – Tool diameter in inches

## Surface Treatments

Surface treatments for high speed steel tools function to condition them, so in certain applications they will outperform tools that have not been treated. Surface treatments do not, however, alter the functional structure of the tool itself.

**Black Oxide** - This treatment is applied to finished tools and produces a thin black iron oxide surface coating. It also provides additional tempering and stress relieving. This coating reduces galling and chip welding and also increases the ability of the tool to retain lubricants. Recommended in iron and steel drilling applications. It should not be used in non-ferrous metals such as aluminum because it increases the loading tendencies of the tool.

**Nitride** - This treatment produces a hard case which is highly resistant to abrasion. It also retards the tendency of softer materials to cling or load on tools. Recommended for tools that are used for ferrous, non-ferrous, and non-metallic materials which are abrasive and have loading characteristics.

**Nitride and Oxide** - Combines the advantages of the lubricity of oxide with the abrasion resistance of nitriding. Recommended for abrasive ferrous applications. Not recommended for soft materials such as aluminum, magnesium or similar non-ferrous applications.

**Chrome Plating** - This treatment deposits an extremely thin layer of chromium on the surface of tools. It reduces the coefficient of friction, and resists chip weld and abrasion. Recommended for non-ferrous and non-metallic materials.

**Titanium Nitride** - This surface treatment improves tool life by acting as a wear resistant and thermal barrier. It also gives the tool a low coefficient of friction and very high surface hardness. It reduces friction and chip welding and acts as a thermal insulator between the chip and the tool. Recommended for use in ferrous materials below Rc 40 and in non-ferrous materials.

## Drill Points

**Conventional Point** - Conventional points with 118° included point angles are the most commonly used because they provide satisfactory results in a wide variety of materials. A possible limitation is that the straight chisel edge contributes to walking at the drill point, often making it necessary to spot the hole for improved accuracy.

**Split Point** - Split points were originally developed for use on drills designed for deep oil holes in automotive crankshafts. Since its inception, the split point has gained widespread use and is applied to both 118° and 135° included point angles. Its main advantages are the ability to reduce thrust and eliminate walking at the drill point. This is a distinct advantage when the drill is used in a portable drill or in drilling applications where bushings cannot be used. The split point also has two positive rake cutting edges extending the center of the drill, which can assist as a chipbreaker to produce small chips which can readily be ejected.

**Notched Point** - Notched points were developed for drilling tough alloys. Commonly incorporated on heavy web drills, which allow the point to withstand the higher thrust loads required in drilling these materials. As with the split point, the notched point contains two additional positive rake cutting edges extending toward the center of the drill. These secondary cutting lips, which extend no further than half the original cutting lip, can assist in chip control and reduce the torque required in drilling tough materials. Notched points can be incorporated on both 118° and 135° included point angles, making them suitable for drilling a broad variety of materials.

**Helical Point** - Helical points change the flat blunt chisel to a "S" contour with a radius crown effect which has its highest point at the center of the drill axis. This crown contour creates a continuous cutting edge from margin to margin across the web. The advantage is its self-centering ability which allows the chisel to cut and enables the drill to cut closer to actual drill diameter. Helical Points are not available under 1/16" diameter.

**Reduced Rake Point** - Reduced rake points are generated by flattening or dubbing both cutting lips from the outer periphery to the chisel. This reduces the effective axial rake to 0–5°, positive which translates to a plowing rather than shearing action. This reduction in shearing is an effective method of preventing the drill from grabbing in low tensile strength materials such as brass. Reducing the rake also strengthens the cutting lip and can assist in breaking chips.

## TECHNICAL INFORMATION

### Common Drilling Terms

**Axis** - The imaginary straight line which forms the lengthwise center of a drill

**Body** - The section of a drill from the shank to the outer edges of the cutting lips

**Body Clearance Diameter** - The portion of the land that has been cut away so it will not bind against the walls of the hole

**Chip Removal** - The ability of a drill to pull material that has been cut away from the point, up the flutes and out of the hole

**Chisel Edge** - The edge at the end of the web that connects the cutting lips

**Chisel Edge Angle** - The angle between the chisel edge and cutting lip, as viewed from the end of a drill

**Cobalt Steel** - A heat-resistant steel that produces increased drill life

**Drill Diameter** - The diameter over the margins of a drill, measured at the point (Dia.)

**Feeds** - Feed rates for drilling are determined by the drill diameter, machinability of materials and depth of the desired hole. Small drills, harder materials and deeper holes require additional considerations in selecting proper feed rates

**Flute** - Groove cut in the body of drills to provide cutting surfaces, permit removal of chips and allow cutting fluid to reach cutting surfaces

**Flute Length** - The distance from the outer edges of the cutting lips to the extreme back of the flutes

**Helix Angle** - The angle formed between the leading edge of the land and the axis of a drill

**High Speed Steel** - The high quality steel used in drills for most maintenance and industrial applications

**IPM** - Feed rate in Inches Per Minute = IPR X RPM

**IPR** - Inches Per Revolution (Feed)

**Land** - The outer portion of the body between two adjacent flutes

**Land Width** - The distance between the leading edge and heel of the land, measured at a right angle to the leading edge

**Lip Relief Angle** - The relief angle at the outer corner of the lip

**Lip** - The cutting edge of a two-flute drill which extends from the chisel edge to the outer edge

**Margin** - The narrow raised surface on a drill body along the flute that stabilizes the drill in the hole

**Neck** - The section of reduced diameter between the body and the shank of a drill

**Overall Length** - The length from the end of the shank to the outer corners of the cutting lip

**Point** - The cone-shaped cutting end of a drill, made from the ends of the lands and the web

**Point Angle** - The angle of the cutting surfaces on a drill point, commonly 118° or 135°

**RPM** - Revolutions Per Minute =  $\frac{\text{SFM}}{\text{Dia.}} \times 3.82$

**SFM** - Surface Feet Per Minute = RPM X Dia. X .26

**Shank** - The part of a drill by which it is held and driven

**Size** - Measurement reference for diameter size of a drill, expressed as either fractional, wire, letter or metric

**Speed** - The speed of a drill is determined by the rate which the outer edge of the tool rotates in relation to the material being cut. In general, the SFM is within a range based upon the workpiece material, its condition, hardness and depth of the hole. The deeper the hole, the greater tendency for more heat to be generated. Speed reduction is often recommended to minimize the amount of heat. It is usually best to start drilling at a slower speed and then increase.

**Split Point** - A special point configuration that eliminates "walking" so holes stay on center

**Web** - The central portion of the body that joins the lands. The extreme end of the web forms the chisel edge of a two-flute drill

**Web Thickness** - The thickness of the web at the point, unless otherwise specified

## Drill Troubleshooting Guide

| Trouble                                      | Possible Causes                                      | Corrections   |

## GENERAL PURPOSE HAND TAPS

Carbon Steel Taps are used to rethread damaged or jammed threads, or to thread mild steels. They can be used for either through or blind holes.

- ▷ *Taper – 7-10 pitch chamfer length. Starts the thread square with the workpiece*
- ▷ *Plug – 3-5 pitch chamfer length. Generally used in through holes*
- ▷ *Bottoming – 1-2 pitch chamfer length. Generates the thread to the bottom*

### GUARANTEED TO TAP FASTER AND LAST LONGER

#### Tech tip!

For increased cutting efficiency and tool life, use TAPCUT lubricant.

## GENERAL PURPOSE SPIRAL POINT TAPS

The angular flutes at the front end of these taps propel the chips ahead of the tap. This reduces loading and clogging in the flutes. Spiral Point taps are ideal for production tapping through holes. Sometimes referred to as "Gun Taps", spiral point taps "shoot" the chips ahead of the tap.

**NITRO**

- ▷ Spiral point taps eject chips ahead of the tap
- ▷ Bright finish for increased lubricity
- ▷ Black oxide surface treatment for longer life
- ▷ Reduced loading and clogging in flutes

## GENERAL PURPOSE OVERSIZE SPIRAL POINT TAPS

Oversize taps are similar in design to a standard tap, but with a pitch diameter that is usually 0.003" to 0.005" larger than standard. Oversize taps are used primarily where a part will be plated or treated after tapping. Available in H7 or H11 limits, in hand taps (2003 and 2005 series) or spiral point (2103 and 2105 series).

► All sizes are individually packaged

# PRODUCTION THREAD FORMING TAPS

**NITRO-MAX™**

Thread forming taps "form" the thread in malleable materials without cutting, eliminating chips. This allows for increased speeds & feeds, and a cleaner threading environment.

- ▷ Manufactured from M4 HSS, an extremely versatile high-speed steel with high carbon and vanadium contents for exceptional abrasion-resistance
- ▷ Offer higher heat resistance and red hardness over conventional High Speed Steel taps
- ▷ TiCN (Titanium Carbo Nitride) coating
  - helps to reduce galling, microwelding, seizing and adhesive wear
  - allows for a smoother threading operation
  - helps to hold sharp edges and reduces the coefficient of friction
- ▷ All sizes are individually packaged

## PRODUCTION THREAD FORMING TAPS

Thread forming taps "form" the thread rather than cut it, which allows the thread to be created without producing any chips. Thread forming taps can run at faster operating rates than standard cut taps, and generally have a longer tool life, sometimes up to 5x longer in some applications. Ideal in materials such as aluminum, brass, copper, low carbon steels, zinc, and 302-303 stainless steel.

-  Thread forming does not produce any chips
-  Thread forming taps have a longer tool life
-  Formed threads are generally stronger than cut threads
-  All sizes are individually packaged

## TAPER PIPE (NPT)

NPT taps are tapered to provide a tight seal and are used mainly with threaded pipes and pipe fittings. These taps are available in both HSS and carbon steel materials. A carbon tap is used to rethread damaged threads. These NPT taps have a bright finish to increase tool life and reduce chip loading in the flutes.

- ▷ Bright finish for prolonged life
- ▷ Most commonly used to produce a tight sealing thread
- ▷ Available in high speed steel and carbon steel
- ▷ All sizes are individually packaged

#### Tech tip!

For increased cutting efficiency and tool life, use TAPCUT™ lubricant

## PIPE TAPS, INTERRUPTED THREAD & NPS

The Interrupted Thread Pipe Taps have every other thread removed except for the first few at the point. They are used for tapping tough metals or those which have a tendency to load the tap teeth.

Straight Pipe Taps (NPS) are used for hand or machine tapping of straight pipe threads.

TAPS

## LEFT HAND TAPS

Left hand taps are used just like normal hand taps except they are rotated counter clockwise to cut left handed threads in the workpiece. They are for general use in production tapping or hand operations in a wide range of application material groups.

- ▷ *Taper – 7-10 pitch chamfer length. Starts the thread square with the workpiece*
- ▷ *Plug – 3-5 pitch chamfer length. Generally used in through holes*
- ▷ *Bottoming – 1-2 pitch chamfer length. Generates the thread to the bottom*

## SPECIAL PURPOSE COMBINED TAP AND DRILL

Drills and Taps in a single pass, reducing cycle time, and therefore reducing the manufacturing cost of a part. Self-Centering point eliminates the need for center drilling or center punching. The drill part of the tool produces a hole correctly sized for approximately 75% of thread. Can be used in a hand held power tool, or a fixed spindle machine tool.

TAPS

## COMMON TAPPING TERMS

### Angle of Thread

The angle included between the flanks of the thread measured in an axial plane

### Back Taper

A slight axial relief on the thread of the tap which makes the pitch diameter of the thread near the shank somewhat smaller than that of the chamfered end

### Bottoming Chamfer

The shortest chamfer (1-2 threads long) for threading close to the bottom of blind holes

### Chamfer

The tapering of the threads at the front end of each land of a tap, by cutting away and relieving the crest of the first few teeth, to distribute the cutting action over several teeth

### Chamfer Relief

The gradual decrease in land height from cutting edge to heel on the chamfered portion, to provide clearance for the cutting action as the tap advances

### Chordal Hook Angle

The angle between the chord passing through the root and crest of a thread form at the cutting face, and a radial line through the crest at the cutting edge

### Crest

The top surface joining the two flanks of a thread. The crest of an external thread is at its major diameter, while the crest of an internal thread is at its minor diameter

### Cutting Face

The leading side of the land in the direction of rotation for cutting on which the chip impinges

### Flutes

The longitudinal channels formed in a tap to create cutting edges on the thread profile, and to provide chip spaces and cutting fluid passages

### Height of Thread

The distance between the crest and the base of a thread measured normal to the axis

### Lead

The distance a screw thread advances axially in one complete turn. On a single lead screw or tap, the lead and pitch are identical. On a double-lead screw or tap, the lead is twice the pitch, etc.

### Pitch

The distance from any point on a screw or tap thread to a corresponding point on the next thread, measured parallel to the axis. The pitch equals one divided by the number of threads per inch

### Pitch Diameter

On a straight thread, the diameter of any imaginary coaxial cylinder, the surface of which would pass through the thread profile at such points as to make equal the width of the threads and the width of the spaces cut by the surface of the cylinder

On a taper thread, the diameter at a given distance from a reference plane perpendicular to the axis of an imaginary co-axial cone, the surface of which would pass through the thread profile at such points as to make equal the width of the threads and the width of the spaces cut by the surface of the cone

### Plug Chamfer

The most common chamfer (3-5 threads long), for hand or machine tapping in through or blind holes

### Rake

Any deviation of a straight cutting face of the tooth from a radial line. **Positive Rake** means that the crest of the cutting face is angularly advanced ahead of the balance of the face of the tooth.

**Negative Rake** means that the same point is angularly behind the balance of the cutting face of the tooth.

**Zero Rake** means that the cutting face is directly on the center line

### Spiral Point (Chip Driver)

A supplementary angular fluting cut in the cutting face of the land at the chamfer end. It is slightly longer than the chamfer on the tap, and of the opposite hand to that of rotation

### Taper Chamfer

A long chamfer (8-10 threads long) for easier starting and engagement in the work piece. More working teeth means that less tapping torque is required, and the chip load is reduced on each tooth

### Threads Per Inch

The number of threads in one inch of length

## TECHNICAL INFORMATION

### Head Profiles / RPM Chart / Speed Recommendations

#### Single Cut

Drillco's Single Cut produces a smooth finish for general purpose use on steel, cast iron and other ferrous and non-ferrous materials. Most of Drillco's Carbide Burrs are available in the Single Cut right hand spiral design.

#### Double Cut

Drillco's Double Cut, with it's chisel type cutting edge, is a machine ground tool built to exacting tolerances of concentricity, size and shape. This accuracy, when combined with precision grinders, results in smooth running, fast metal removal and fine finishes.

The right and left hand helical flutes combined to produce an chisel type cutting tooth. This results in faster penetration and stock removal with minimal bounce or chatter. The Double Cut design also produces an easy to handle granular type chip, in most metals, as opposed to the conventional sliver type chips. Throughout it's life, the Double Cut gives faster stock removal, less operator fatigue, and maintains a good finish on the widest possible variety of materials.

#### Chip Breaker

The addition of a chip breaker will reduce sliver size and improve operator control at a slightly reduced surface finish. Available as a special.

#### Diamond Cut

The Diamond Cut is very effective in heat treated and tough alloy steels, producing extremely small chips. It offers very good operator control with good stock removal at the sacrifice of finish. The diamond grind will reduce tool life, however. Available as a special.

#### Aluminum Cut

Drillco's Aluminum Cut burrs are outstanding on soft or nonferrous type materials. Use the Aluminum Cut design on aluminum, magnesium, brass, lead and most plastics.

#### Speed

High speeds are essential for efficient and economical use of a carbide bur. At high speeds there will be less tendency for chips to build up in the flute. Also, the burr will cut more freely in corners or pockets, and reduce the chances of jamming or wedging.

The selection of operating speeds for a carbide burr is usually less exacting than for most other cutting tools. Rather than specify a different grinder speed for every burr diameter used, one grinder will normally be used for many different burr sizes. However, for most efficient operations, the grinder should be specified with consideration given to diameter of the burrs that will be used.

Carbide burrs should operate between 1,500 and 3,000 surface feet per minute. Using these guidelines, a grinder can be selected that will efficiently work with a fairly broad range of burr sizes. For example, a 30,000 RPM grinder can be used with a 3/16" to a 3/8" diameter bur. A 22,000 RPM grinder will be satisfactory for burrs ranging from 1/4" to 1/2".

Speeds are an important factor in achieving desired stock removal rates and workpiece finish. Increasing the speed will improve finishes, while lower speeds will remove material more rapidly.

### ANNULAR CUTTERS PERFORMANCE CHART

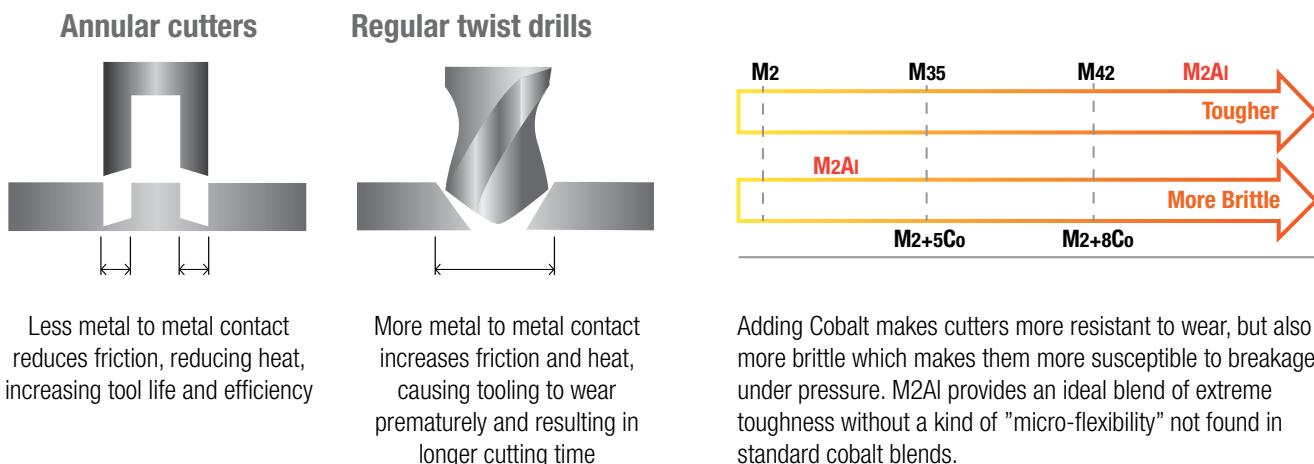

# ANNUAL CUTTERS EXPLAINED

## HIGH-PERFORMANCE ANNUAL CUTTERS

When drilling large holes through thick, flat metal surfaces, it is often more cost effective to use an annular cutter, which cuts at the circumference of the circle, instead of cutting through the entire area of the circle. This allows you to make holes faster and more efficiently.

WALTER annular cutters are tougher because they are made with a sophisticated high speed steel and aluminum blend (M2Al). This advanced HSS blend extends the life of the core cutters by providing excellent toughness and durability, while also reducing the brittleness of the cutter. Conventional cutting tools are typically enhanced with cobalt to increase the resistance to wear (M35 or M42). However, as more cobalt is added, the product actually becomes more brittle, which increases the risk of breakage under load.

Through a graduated hardening of the cutter body, and by adding aluminum to the base material, WALTER core cutters have more "micro-flexibility" than M35 or M42 core cutters. This makes WALTER HSS annular cutters less brittle than a regular M42 annular cutter, and also makes them last much longer than other high speed steels. An exclusive triple tooth design and special fluting angle help optimize chip evacuation and eliminate chip debris. WALTER's exclusive AlCrN coating on the ICECUT™ line of coated annular cutters forms a nano-sized lubrication layer when heated, making it self-lubricating and preventing materials from sticking, melting or deforming during hole-making. The ICECUT™ annular cutters provide the longest life of all coated HSS annular cutters.

# HIGH SPEED STEEL ANNULAR CUTTERS

**Produce large diameter holes efficiently and quickly with less energy**

Rather than drilling out the metal with a solid drill, Drillco cutters remove only the periphery of the hole, ejecting a slug at the end of the cut.

- ▷ For a wide range of materials
- ▷ Up to 4" diameter and 4" depth of cut
- ▷ Weldon Shank

## SST™ CORE CUT ANNULAR CUTTERS

SST

**05-A / 05-E Series****HIGH SPEED STEEL**

1", 2" &amp; 3" Depth of Cut

Fractional

**Guaranteed to outperform all uncoated cutters**

Super Speed Tip (SST) Core Cutters are made with state-of-the-art surface treatment technology that removes porosity during the fabrication process. This creates a perfectly smooth finish which allows for a better evacuation of material while cutting. It also helps to improve product life and reduce cutting time as it decreases friction with the work surface, which in turn reduces the amount of heat generated.

- Cuts faster
- Lasts longer
- Universal shank
- Exclusive SST surface treatment
- Multiple tooth design
- Packaged in reusable plastic packaging

Guaranteed to cut more holes in less time!

ICECUT™ annular cutters are coated with an exclusive mixture of chromium and aluminum (AlCrN) and are designed to be used where lubricants are not permitted or problematic to apply. This technology outperforms any annular core cutters coated with Titanium Nitride (TiN) or Titanium Aluminum Nitride (TiAlN). By incorporating a chromium aluminum blend into the coating, WALTER ICECUT™ annular cutters generate less heat and can withstand temperatures at least 200°C higher than conventional TiAlN cutters. This exclusive coating makes the ICECUT™ more resistant to higher stress under load and impact.

- Well-known quality and durability
- Lasts longer than uncoated core cutters
- Exclusive ICECUT™ AlCrN coating
- Fully ground extra large flutes
- Packaged in reusable plastic packaging

**Top performance and maximum productivity on hard metals and uneven surfaces!**

WALTER Carbide Core Cut annular cutters accurately drill large diameter holes in a variety of hard or abrasive materials such as stainless steel, cast iron, tough alloys or composite materials. They outperform and outlast conventional HSS cutters and allow for higher speed and feed rates while requiring less effort to cut through some of the industry's toughest metals.

#### Morse taper shank adaptors with coolant inducer

For use of WALTER annular cutters on drilling units with a Morse taper spindle. Coolant inducer feeds coolant through the pilot pin to increase cutter life.

#### Morse taper shank adaptors without coolant inducer

For use of WALTER annular cutters on drilling units with a Morse taper spindle. Ideal for all drilling machines that are equipped with an external cooling source.

#### Fein and Nitto adaptors

For use of WALTER annular cutters on all Fein and Nitto magnetic drills.

#### Extension adaptors

Leverage an arbor adaptor with your WALTER core cutters to drill deeper holes. These durable arbor adaptors and allow you to drill up to 4" for a fraction of the price of a full size core cutter.

### Drilling Recommendations

- Inspect the hole cutter to ensure it is properly assembled and complete before use.
- To operate, use cutters on an electric hand drill, impact drill (rotary type), drill press or similar. Consult your power drill manufacturer's manual to see RPM ranges on low and high settings.
- Let the tool do the work! When beginning the drilling process, use a lower feed rate. Do not apply too much pressure or force onto the cutter or you may damage the carbide teeth.
- During operation, ensure the revolving speed is not too slow. This will help to prevent locking which can damage the tool.
- Shanks have 3-flats to reduce slippage in the chuck. Shank sizes of Drillco's TCT Hole Cutters are as follows: 9/16" to 2-5/8" have 3/8" shank; 2-11/16" to 4" have a 1/2" shank.
- Can be used in a wide range of materials including aluminum, copper, steel, alloy steel, stainless steel, brass, and non-metallic materials such as plastics.
- To ensure optimal performance and extend tool life, a cutting fluid should always be used. Drillco offers a wide range of sizes and styles of environmentally safe heavy-duty cutting fluid.

# NEVER STOP

JOEY DHOOmA

PROCESS MECHANICAL FOREMAN

“

The water never  
stops flowing here.  
We need to be precise  
on everything we do  
on-site.

”

As a Process Mechanical Foreman, Joey oversees a team that is implementing a series of major improvements to a large water treatment plant.

The job is not an easy one. He works in snow, rain, and even in blazing hot temperatures as the water tanks he sometimes works in feels like “an oven” in the summer. On top of that, from time to time he finds himself knee-deep in sewage water that is filled with harmful bacteria, which, as you probably guessed, emits an unpleasant smell. But none of that really bothers him. “I never was afraid to get dirty and I think I’m immune to the smell”, he says and adds: “whatever is thrown at us, we always manage to prevail and get through it”.

The problem-solving aspect of his work is what motivates him the most. Since the water that goes through the facility can never stop flowing completely, the sequencing of the project becomes a real challenge. “We have to get very creative and develop different methods of diverting the flow of water out of our way”. Another facet that he appreciates is the fact that he gets to witness the evolution of the project from its inception to its completion. He occasionally glances back and recognizes how impressive the facility’s enhancements have been thus far.

Joey is a perfectionist to the core. He likes it when things are done correctly, the first time. A small inaccuracy can lead to catastrophic events. “We have to be on the mark” he says. For someone who strives for perfection, working with the right tools is not optional. He added: “Having the right tools means a lot because you will drill holes faster, cut metal quicker, put things together a lot better. If you don’t have the proper tools you will fall behind, you’ll be scrounging around site looking for the right stuff, you will waste time and money. It just wouldn’t work for us.”

We could say that, at the very least, he is very dedicated to his career. He’s the one who opens up the jobsite in the morning and the one that puts the padlock on the gates at night. Just like the thousands of gallons of water that rush through the pipes he installs and repairs everyday, Joey never stops.

## FEATURES

All ICECUT™ Magnetic Drilling Units

### 1 Centered Control Panel

Centered positioning of the electronics for easy control from any position. Whether it's a personal preference, or if the operation requires drilling from a specific side, the central control panel allows for efficient and easy operation.

### 2 Mandrel Support

Absorbs vibration for added stability and easy centering. The ball bearing support ensures the motor and chuck are perfectly aligned. It also provides smooth and precise cutting operations, and reduces chipping or breakage of the cutter.

### 3 Full-Body Integrated Wiring

For convenience and improved durability. No electrical wires will get in the way while drilling or moving your unit. Moreover, this prevents common failures due to mishandling (like carrying the unit by the wire, or the wire catching on an object).

### 4 Steel Sliding Guard

Easily accessible, and extra safe. Slide guard upwards, position unit, slide guard down and start drilling safely while containing chips and lubricant to prevent them from spilling out onto the rest of the work surface.

### 5 Direct Access

Direct access to carbon brushes makes maintenance simple. The powerful motor will always operate at maximum efficiency, and when it is time to change out the carbon brushes, their easily accessible location makes maintenance very convenient!

### 6 Ergonomic Handle

The ergonomic handle with a smooth grip – sturdy and lightweight - makes moving the unit easy. Its design further reduces overall weight, and the smooth grip ensures easy portability.

### 7 Quick-Release Reversible Handle

Quick-release reversible handle – allows for positioning in confined or restricted spaces. The handle can be removed and reattached on whichever side the operator prefers, making this a very user-friendly system.

### 8 Material & Thickness Detector

Unit will not start when the magnetic holding power is insufficient to secure the unit to the workpiece and operate safely. Prevents accidental starts: unit will not start on any non-ferrous material like wood, plastic, or when held in the air.

### 9 Mechanical Clutch

The ICECUT 200™ has a safety slip clutch, built into the gear drive, that will neutralize momentum and eliminate dangerous backlash for added safety. Prevents cutter breakage.

### Lightweight

At 10 kg (22 lbs.) and 12.2 kg (27 lbs.) respectively, the ICECUT 100™ and ICECUT 200™ are the lightweight champions in their category. With a slim body, simplified carrying handle and powerful magnet, these units were designed with portability and ergonomics in mind.

### Swivel Base

As a feature for the ICECUT 300™ and ICECUT 400™, it allows to swivel the magnetic drill by 60° on each side, and also slide by 3" for a perfect and easy alignment.

### Equipped with SAFETY strap

For added security when hung upside down or for frame drilling operations.

## ICECUT 200™

### The versatile unit

Powerful – 2-speed – yet only 27 lbs – ideal for a wide range of production or job site operations.

## ICECUT 200PM™

### Permanent Magnet Magnetic Drill

Operator safety is the number 1 priority with the new ICECUT 200PM™. By swapping the electromagnetic base for permanent magnet, the machine does not need electricity to be securely fixed in place. This is the perfect unit to use on job sites or any applications that may involve inconsistent power sources.

Permanent Magnet for additional safety. With its double action lever, accidental magnet deactivation can be avoided. The magnet will also remain activated in the event of sudden power loss.

Always ensure the coolant tank is filled and a constant stream of ICECUT™ (53-C 055) is flowing when drilling automatically.

## ICECUT 250™ AND ICECUT 250P™

### Features

Get all the power and versatility from the ICECUT™ magnetic drilling systems, now available in a more compact size for easy portability. Use the ICECUT 250™ for ultimate versatility when drilling or tapping larger holes. The ICECUT 250P™ is the unit of choice for working on curved surfaces or pipes thanks to a convenient permanent magnet.

"Accudrill" system protects against overload and reduces the risk of cutter breakage. When you want to achieve the most productive drilling operation, you need to make sure you use the most power. This prevents the motor from overloading to reduce damage to the tool itself while also minimizing the risk of eventual damage to the cutter from overheating or movement.

## HEAVY-DUTY BALL NOSE END MILLS

Ball nose end mills are used where rounded details must be machined in a part (for example, a slot with a rounded bottom). They are also used where sharp machined corners must be avoided. Ball nose end mills are also widely used for delicate cuts on contoured surfaces of molds and dies.

- ▷ Have rounded end cutting edges
- ▷ Available as a center cutting tool only
- ▷ All sizes are individually packaged

## GENERAL PURPOSE MULTI-FLUTE FINISHING END MILLS

- ▷ Provide a better finishing capability than the 2-flute end mill
- ▷ Cutting action is smoother than that of the 2-flute end mill, with less chatter and flutter
- ▷ Have ample chip carrying capacity
- ▷ Multi-flute end mills are preferred for profiling, side milling, and shallow slotting applications
- ▷ All sizes are individually packaged
- ▷ Non-center cutting end mills have cutting edges only on the sides and are used only for side milling

## GENERAL PURPOSE BALL NOSE END MILLS

Ball nose end mills are used where rounded details must be machined in a part (for example, a slot with a rounded bottom). They are also used where sharp machined corners must be avoided. Ball nose end mills are also widely used for delicate cuts on contoured surfaces of molds and dies.

- ▷ Have rounded end cutting edges
- ▷ Available as a center cutting tool only
- ▷ All sizes are individually packaged

## GENERAL PURPOSE 2-FLUTE FINISHING END MILLS

Cobalt end mills offer increased heat and wear resistance over standard HSS end mills. This results in faster operation rates, and longer tool life.

- ▷ Cobalt end mills run about 10% faster than conventional HSS end mills
- ▷ Shorter machining times and permits fuller utilization of available machine horsepower
- ▷ Retain their sharpness for longer, providing more cuts between grinds and less machine downtime, resulting in lower end mill tooling costs
- ▷ All sizes are individually packaged

## GENERAL PURPOSE BALL NOSE END MILLS

Ball nose end mills are used where rounded details must be machined in a part (for example, a slot with a rounded bottom). They are also used where sharp machined corners must be avoided. Ball nose end mills are also widely used for delicate cuts on contoured surfaces of molds and dies.

- ▷ *Have rounded end cutting edges*
- ▷ *Available as a center cutting tool only*
- ▷ *All sizes are individually packaged*

# ROUGHING END MILLS

Roughing end mills are designed for extremely rapid stock removal. These end mills can remove material up to 3x the rate of regular end mills. Designed to machine low alloy, high strength steels at faster feed and speed rates. Utilizes a wavy tooth form cut. These teeth form many successive cutting edges producing many small chips, resulting in a relatively rough surface finish.

When your application demands higher lubricating action than cooling capacity, non-water miscible, neat cutting oils are effective alternatives to water-mixed lubricants. For any specific application, achieving optimal performance with these cutting oils depends on their viscosity as well as the content and effectiveness of their active additives.

The WALTER COOLCUT™ product range covers the entire bandwidth of viscosities, starting with low viscosity finish oils at approximately 3 mm<sup>2</sup>/s (40 °C/104 °F) to higher viscosity oils up to approximately 100 mm<sup>2</sup>/s (40 °C/104 °F) for the most difficult broaching operations. Using high-quality base oils and modern additive technologies, WALTER's COOLCUT™ solutions are optimal for modern machining processes.

#### Features

- ▷ *High cutting action for long tool life and good surfaces*
- ▷ *Low evaporation base oils reduce the risk of oil mist and fire hazards*
- ▷ *Will not irritate skin*

# SUPPLIED-AIR FLOW VALVES

## LOW-PRESSURE FLOW ADAPTER

Designed to be used with a Low-Pressure Supplied-Air Respirator, the Low-Pressure Flow Adapter allows the hood to connect to a breathing air pump or any low-pressure air source. It is a low-profile, lightweight, plastic threaded fitting that offers the convenience of OBAC quick-connect design with a waist belt and clip assembly. The controller is economical enough to dispose of with the hood assembly or save for use with a replacement hood. It requires an air supply pressure range of 6-50 psi.

**Order No.** 9910-11

## HIGH-PRESSURE AIR TEMPERATURE CONTROLLER

The HP Air Temperature Controller adjusts the amount of air to the hood and adjusts air 25 degrees warmer or cooler than the ambient air for use in cold or hot environments. It includes a waist belt and leather sheath to protect the user from temperature extremes.

**Order No.** 9990

## HIGH-PRESSURE PERSONAL AIR COOLER

The HP Personal Air Cooler is ideal in hot environments, adjusting the air flow from high-pressure air sources as low as 25 degrees colder than ambient air for an improved working environment. Includes a waist belt with the airflow valve.

**Order No.** 9991

## HIGH-PRESSURE ADJUSTABLE-FLOW CONTROL VALVE

The HP Adjustable Flow Control Valve adjusts air flow from any high-pressure air source for greater comfort. It offers a large gripping handle that makes it easy-to-use with a gloved hand. From the lowest flow position, the control valve will deliver the minimum flow required by NIOSH. Includes a waist belt with the airflow valve.

**Order No.** 9992

# BREATHING AIR CASCADE PRODUCTS

## BREATHING AIR CASCADE KITS

Used to reduce high pressure through a series of tee and flexible pigtail connectors, our exclusive Low-Pressure Breathing Air Cascade Kits offer you the ease of ordering all the parts you need for your system with one part number. No more forgetting a piece or mismatched fittings. Inline check valves on both the tee and flexible pigtail (available in both high and low pressure) are used to allow for uninterrupted air flow while replacing depleted cylinders. An optional low-on-air warning device alerts the user when air is low. Individual components are available for adding on to an existing system, or for building a high-pressure breathing air cascade system.

## LP ALLEGROAIR AIRLINE COOLING SYSTEM

Perfect, low-cost, portable means of cooling breathing air while keeping workers comfortable, and productive. The system is capable of reducing air temperature from 180° F to 50° F. The cooling system is connected to the breathing air pump through a 5' long inlet supply airline. Air flowing through the FDA Grade PVC coil inside the cooler reduces the air temperature by having ice poured on and around the coil. The outlet air is filtered by a 5-micron particulate air filter. An adjustable relief valve allows the user to adjust the air flow. Can be used with up to 3 workers. Comes with durable wheels and a locking telescoping pull handle. Dimensions: 20" w x 21" d x 24" h, 28 lbs. without ice.

**Order No.** 9820-LP

## BREATHING AIR PUMP CO MONITOR

The Breathing Air Pump CO Monitor alerts workers using supplied-air respirators when the level of carbon monoxide has exceeded 10 ppm (5 ppm Canada). The CO monitor can be operated in AC or DC mode and uses a single 9-volt alkaline battery. Housed in a portable, rugged Pelican case with handle and latches for protection and security. Comes with a threaded Tee. Dimensions are 8 1/4" l x 3 1/2" w x 6 3/4" h. Weighs 3 1/2 lbs.

**Order No.** 9900-45

## FLOW TEST KIT FOR CONSTANT FLOW SUPPLIED-AIR RESPIRATORS

CFM tester checks the volume of air that gets to the respirator. A flow meter simply quick-connects onto an airline hose to check the respirator system for NIOSH compliant air flows. The kit contains flow meter and a full assortment of quick-connect plugs and adapters to fit all respirator manufacturer's airline hoses. Excellent for use with breathing air pumps.

**Order No.** 9900-40

*NOTE: NIOSH mandates 4 CFM for tight-fitting masks and 6 CFM for hoods.*

## INLET HOSE EXTENSION KIT

Respirators must be supplied with a source of clean, breathable air at all times as per OSHA 29 CFR 1910.134. In order to achieve this requirement, at times it may be necessary to use an inlet hose extension from the breathing air pump to a clean air environment. This can be achieved by connecting one of our inlet hose extension kits, allowing the inlet air source to be 50 feet away from the pump. Or connect up to 5 total kits together for a total of 250 feet away from the pump. Included in the kit is (1) 1" x 50' heavy-duty hose and various fittings to ensure the hose fits to whatever Allegro breathing air pump you have.

## FULL-MASK RESPIRATOR

Made of silicone rubber for better durability and will hold its shape even in extreme heat and cold. The double sealing flange provides an improved face-to-mask seal, and a deep chin pocket provides a better, more comfortable fit. The replaceable polycarbonate lens offers a wider, distortion-free viewing area with an anti-fog, anti-scratch coating. The unique "over the shoulder" hose design clips at the collar and an adjustable belt holds the air hose out of the way of work. **NIOSH approval TC-19C-0531**

## SINGLE BIB MAINTENANCE-FREE TYVEK® HOOD

Made of a poly-coated Tyvek® material, this hood is designed and constructed in one-piece with the downtube and head suspension completely integrated. This makes it maintenance-free eliminating the need for decontamination of the breathing tube or replacement parts since the entire assembly is disposed of after use. The Tyvek® material is flexible, splash-resistant and seals in the air flow. The hood features a large lens for increased visibility. **NIOSH approval TC-19C-0532**

## DOUBLE-BIB MAINTENANCE-FREE TYVEK® HOOD

Made of a poly-coated Tyvek® material, this hood offers the increased protection of two bibs. The inner bib tucks inside protective garments so air flows down for a cooling effect on the body, and the outer bib secures under the arms with hook-and-loop to keep the hood from riding up. The hood features an extra-large lens for better visibility. It offers the same convenient design with the downtube and suspension built-in, making the complete hood fully disposable. **NIOSH approval TC-19C-0532**

**ALLEGRO HOODS EXCEL IN THIRD PARTY TEST AT U.S. ARMY'S EDGEWOOD CHEMICAL BIOLOGICAL CENTER**

Allegro Industries contracted the US Army's ECBC (Edgewood Chemical Biological Center) to perform a third-party test using a protocol similar to the one used on a limited number of styles in the 1996 study. The protocol had to be slightly modified to adapt to the procedures used by the ECBC. The goal of this test was to certify and record actual simulated workplace protection factors (SWPF) of the Allegro Hoods and to compare the results of these tests to those hoods tested in the 1996 ORC Study. The test results show that the Allegro hoods do perform at least equal to those that now have an OSHA variance of APF (Assigned Protection Factor) 1000 as a result of the ORC Study.

Allegro's objective for the Protection Factor test was to determine the efficiency of the Allegro Supplied-Air Hood (SAH) in protecting the wearer from aerosolized chemical and airborne biological particles. The tests conducted at ECBC incorporated the use of fifteen (15) civilian test subjects. Each test subject was submitted to twelve two-minute-long exercises. The exercises used were derived from the 1996 ORC Study and were chosen because of their similarity to everyday tasks performed in the pharmaceutical manufacturing environment. All subjects were tested twice in each hood configuration in the aerosolized ECBC Test Chamber.

The sophisticated equipment ECBC used to record the results during the test offered 1200 data points for each exercise. The state-of-the-art facility is capable of detecting fit factors up to 100,000. An analysis of the test results indicates that, at the 5th percentile, Allegro's hoods tested to a fit factor of the maximum of 100,000.

# SAR PHARMACEUTICAL HOODS

The Allegro Pharmaceutical Maintenance-Free Tyvek® Hood and the Pharmaceutical Maintenance-Free Saran™ Hood are NIOSH approved and the unique design is patented.

These hoods are engineered for ultimate protection, job performance, and maintenance-free, one-time use. The Allegro high-pressure hoods are specifically designed to seal in air flow and seal out harmful chemical and airborne particulates.

Both the Tyvek® and the Saran™ hoods have a patented breathing tube integrated directly into the hood. The tube is splash-resistant and entirely disposable. Although made flexible for on-the-job performance, the multi-layer foam tubing material prevents downtubes from being crushed or twisted, with the tube's foam layers providing a sound-dampening system both unique and made in accordance with stringent NIOSH requirements.

These hoods are engineered without head harness for freedom of movement and comfort. Hook-and-loop underarm straps keep the hood from riding up. Each hood has a 8" x 14" viewing window which offers an extensive field of vision and aptly accommodates workers with beards or goggles. The hoods can be used with an adjustable HP Flow Control Valve Allegro HP Personal Air Cooler or an Allegro HP Air Temperature Controller.

## DOUBLE-BIB PHARMACEUTICAL MAINTENANCE-FREE TYVEK® HOOD

Order No. 9911-29

## DOUBLE-BIB PHARMACEUTICAL MAINTENANCE-FREE SARAN™ HOOD

Constructed from Saran™-coated Tyvek®, this double-bib hood features heat-taped seams to form a liquid- and gas-tight seal. Impermeable to air and moisture, the Saran™ Hood protects workers effectively against a broad range of chemicals and other hazardous materials. **NIOSH approval TC-19C-0357**

# DONE RIGHT

KORY NIEMI

SENIOR WELDER

“  
You’re only as good  
as your last job.  
So I need consistent,  
efficient tools  
to outdo myself.  
”

For as long as he can remember, Kory Niemi’s loved working, getting physical and taking pride in his craft. When at the crossroads between attending university or enrolling in trade school, he chose the latter, embarking on what’s now become his career and passion: welding massive industrial structures.

“Since my first school project,” he says, “I’ve always wanted to feel great about my work and to know it’s the absolute best it can be.”

Now a senior welder with 15 years of experience under his belt, Kory’s projects are intimidating in size and complexity. His employer manufactures large industrial tanks, stacks, pressure vessels and custom equipment, some pieces weighing up to 244 tons.

“Everything needs to run smoothly, everything needs to flow, and I need tools I can rely on.” He describes the long days he spends working at heights and inside tight, uncomfortable spaces, as well as the rigorous inspections his pieces go through; “My work needs to be flawless because it goes through X-rays and tons of testing. If something fails, it delays the whole process and time gets wasted.”

Kory attributes his meticulousness and commitment to precision from his family, who taught him at a young age to always do things right. “I want every weld to be perfect and I want every piece to shine,” he says, adding that his desire to keep evolving and getting better often keeps him up at night. “Working isn’t just something I like doing, it’s something I need to do,” he emphasizes.

The last and most satisfying part of each job, he says, is watching the piece leave the shop on its way to its final destination. “We have to take the doors off the warehouse to get it out, the police come to guide traffic and hydro teams lift the power lines so it can pass underneath.” Once the structure disappears over the horizon, Kory heads back inside, flips down his helmet, and gets to work on his next piece.

His teacher once told him, “You’re only as good as your last job” – a philosophy that continues to guide him today. “I want each job to always exceed the last one that I did. That’s my drive.”

#### PRO TIP!

As a rule of thumb, start with a shade that is too dark to see the weld zone. Then go to a lighter shade which gives sufficient view of the weld zone without going below the minimum.

**NEW**

**ARCOME® LENSES OFFER BETTER OPTICAL CLARITY, SO WELDERS CAN SEE COLORS LIKE THEY'VE NEVER SEEN BEFORE.**

#### HD TECHNOLOGY

See color in its truest form with ArcOne®'s new HD Technology. This innovative technology increases the range of visible light when looking through the lens, and while welding. By increasing the range of light, more natural colors can be seen, providing a clearer, more defined view of your work area.

HD Technology allows a wider range of visible light on the color spectrum, versus True Color, which tends to be more on the blue side of the spectrum, showing a slightly blue tint when looking through the lens.

**Viewing Area:** The total area through which the user can see. Larger viewing areas tend to be preferable for welding in different positions or all-day use because they increase peripheral vision.

**HD Technology:** This innovative technology increases the range of visible light seen through the lens providing a clearer, more defined view of the work area.

**Light State:** The shade when the welding filter is not welding. The lighter the light state, the better the welder can see his/her work area.

**Dark State:** The range of shades that determine how dark the filter will get when the arc is struck. Required darkness depends on the welding application.

**Variable Sensitivity:** Welding lens feature that allows the user to set the sensitivity of the sensors. High sensitivity is required for low-light or low amperage applications; Low Sensitivity is ideal for intense light- or high-amperage applications.

**Variable Delay:** Lens feature that allows the welder to set the number of seconds it takes the lens to switch back to its light shade after the weld is complete.

**X TIG®:** A mode designed for welding in an environment with obstructed views. Sensors are triggered by the electromagnetic field created when welding.

**Cut & Grind Mode:** Ideal if you frequently switch between welding, cutting, or grinding.

**Tig Rating:** The minimum light or amperage for which the auto-darkening lens will activate.

**Arc Sensors:** An increased number of arc sensors makes the lens more sensitive and provides better lens response.

**Digital:** Whether or not the auto-darkening lens has a digital display.

**Solar Powered:** Whether or not the lens has a solar battery. ArcOne®'s Vision® BFFVX hood can last up to 6 months on a single charge.

## VORTEX COOLING OR HEATING VEST

Delivering constant and adjustable cooling or heating, the Vortex Vest is especially popular for workers in confined spaces as well as foundries, steel mills, asbestos abatement, and paint baking operations. With no moving parts, the vortex tube forces a simple heat exchange to separate compressed air into hot and cold airstreams. The PVC vest delivers continuous cooled or heated air through its perforated, inner lining. This vest offers full range of motion and can be worn under protective clothing.

## LOW PROFILE VORTEX COOLING VEST

This air vest is designed to afford cooling to personnel in circumstances where air conditioning is not feasible. The vest connects to any existing clean compressed air source. Engineered jets keep the wearer continuously cooled with refrigerated air. The airflow enhances the body's natural evaporative cooling. The airflow additionally keeps the grit, dust, and fibers out. Available with a vortex cooler for additional cooling effect.

# HIGHLY SKILLED

MAGALI COTÉ

ROPE ACCESS SUPERVISOR, WELDER, MILLWRIGHT, HARD HAT DIVER

“  
I've worked on hydro dams, mines, huge industrial projects. I need to perform and I need my tools to perform, too.  
”

Magali Côté's never lived a boring day in her life. The freewheeling Jane of all Trades has half a dozen job titles, a persistent need to be under water, and an Instagram account revealing a life of adventure in some of the world's most extreme environments.

Professionally, she works as a commercial diver, rope access supervisor, welder and millwright - dangling from bridges, cutting and grinding the sides of hydro dams and solving problems at remote northern job sites where the sun never sets. On her days off she sets free-diving records and takes spontaneous 30-hour road trips to San Diego on her Triumph.

While crafting a career to align with our passions has become increasingly common, Magali's taken the concept, molded it to perfection and buffed it to a lustrous shine. She lives by her motto “If somebody made it, I can fix it” and believes that with the right tools and attitude, anything is possible and every job can be made easier.

“I got to where I am now by always saying yes,” she says when explaining how she developed her vast array of skills and credentials. “When I was five my dad gave me a set of wood chisels and that's how I realized I loved working with my hands. When I got older and left home, he gave me my first toolbox along with the philosophy that life is all about adding new tools to your box.”

Today, her toolboxes are as loaded as her work schedule. But when it's time to get down to business, her needs are simple: “For me, tools should be practical and powerful,” she explains, “whether I'm hanging off the side of a refinery or welding 3000 feet underground in a potash mine, I need tools I can count on, they need to be an extension of my hands.”

Besides having the right equipment and experience, Magali regards her grit and creativity as the real drivers of her success. “I look at these huge job sites like they're jungle gyms where I need to use my brain to get the job done right and done safely,” she says, “and I've learned a lot about myself my constantly having to tolerate such extreme conditions.”

While some might think being a woman in such a male-dominated industry might be a challenge, Magali confidently explains that it isn't. “I'm a champion of women in this industry and there's nothing a man can do that we can't do. My advice for women starting in this field is to do your best, stay consistent, keep doing your thing and you'll blend right in.”

# BUILT TO LAST

ROB REID

IRONWORKER & GENERAL FOREMAN

“  
Everything I built  
is still standing. It's  
an accomplishment,  
right?  
”

The job of an ironworker is both physically demanding and often dangerous. “You need a little more backbone than most to do the crazy job that we do”.

Meet Rob Reid, a proud ironworker for over 20 years.

Rob has always been drawn to the metalworking industry. At the age of 17, he was already working as a steel fabricator building plywood mills. However, spending the scorching summer months in the shop wasn't for him. His solution: get out on the field and start erecting.

Throughout the years, Rob contributed to the construction of several infrastructure mega projects. In fact, one of the things he likes the most about his job is knowing that the fruit of his labor will most likely pass the test of time and remain standing for many more generations.

Today, Rob is working on the world's longest cable-stayed bridge connecting two countries: The Gordie Howe Bridge. It will be over 120 ft wide and over 780 ft high. Once completed, the bridge between Windsor, Ontario, and Detroit, Michigan will be among the top five longest bridges in North America.

We asked Rob about the challenges of working at great heights and having cranes and pieces above his head. “You can't think about the danger. It becomes an everyday thing!” Rob says. “Safe tools allow me to do a better job, so I can focus on the task at hand. We already face a lot of hazards on-site, so safety is key.”

If you need help with something on the site, Rob is your go-to guy. He's always there to try to make everyone's job easier by sharing his tricks of the trade and tips for working more efficiently. And he does so with the best of attitudes: “I believe I'm a pretty easygoing guy. I'm just trying to make everybody's day go by easier. There is no sense in bringing the grouchy to the work, so I'm always smiling and laughing”. When asked what sets him apart from his coworkers, without hesitation, he said: “experience”.

“I'm just proud to be an ironworker.”

Rob has no intention of stopping or retiring anytime soon. “I don't see an end yet, I just keep going”. Just like every structure, he works on, Rob is built to last.

## M2 MULTI-MOLD™ CASSETTE

The M2 is a patented two-sided sampling cassette for easier and more efficient use in the field and in the laboratory. This is the first cassette to provide sampling options to field personnel. Each cassette can be used to:

- ▷ Collect two different samples
- ▷ Collect two identical samples concurrently
- ▷ Collect one sample while using the other side as a control

The M2 cassette is also the very first of its kind for laboratory personnel. It provides one-time preparation for two samples, pre-printed traverse marks on the collection slide for standardized counting, and side-by-side comparison of the samples under the microscope.

\*When selecting a blower, all ventilators have two characteristics to consider:

1. Air pressure – Force of air volume is measured by inch of water gauge (WG) 2. Airflow – Air volume delivered and measured by cubic feet per minute (CFM)

## HOW TO CHOOSE YOUR ALLEGRO BLOWER

Scan this code to access our Blower CFM calculator.

### VENTILATION AIR EXCHANGE CHART

Allegro Industries recommends air exchange at a rate of at least 20 times per hour.

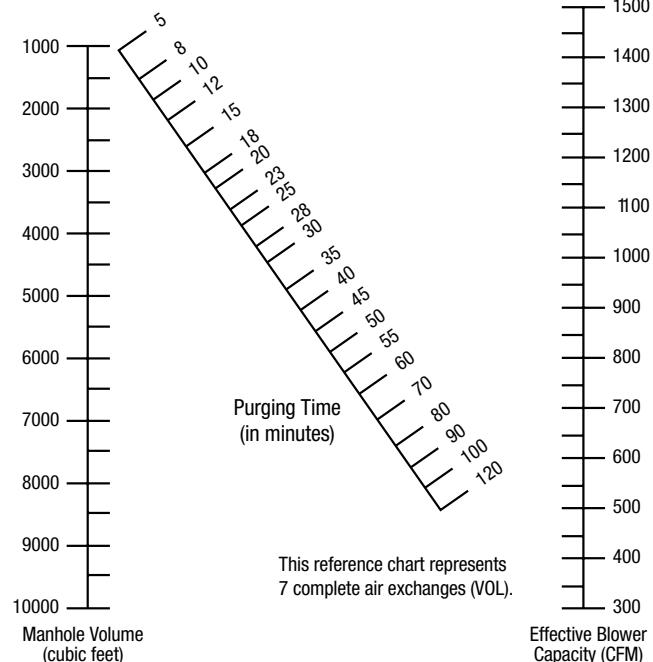

| Confined Space Volume Cubic Feet) | Blower Cubic Feet Per Min. (CFM) Output Needed* |
|-----------------------------------|---|
| 1000                              | 333   |

| 10000                             | 3333  |

\*Take into account 90° bends of ducting. See specifications under each blower description.

### USE OF ALIGNMENT CHART:

1. Place straightedge on manhole volume (left scale).
  2. Place other end of straightedge on blower capacity (right scale).
  3. Read required purging time, in minutes, on diagonal scale.
  4. If two blowers are used, add the two capacities, then proceed as above.
  5. When toxic gases are encountered, increase purging time 50%.
  6. Effective blower capacity is measured with one, or two 90° bends in standard 15-foot blower hose.
- See chart.

This reference chart represents 7 complete air exchanges (VOL).

## HAZARDOUS LOCATION INFORMATION

NOTE: Fibers and flyings are not likely to be suspended in the air, but can collect around machinery or on lighting fixtures and where heat, a spark or hot metal can ignite them.

### CLASS I

(NEC-500-5)

Those areas in which flammable gases or vapors may be present in the air in sufficient quantities to be explosive or ignitable.

#### DIVISION I

(NEC-800-5, 6, 7)

In the normal situation, hazard would be expected to be present in everyday production operations or during frequent repair and maintenance activity.

### CLASS II

(NEC-500-6)

Those areas made hazardous by the presence of combustible dust.

### CLASS III

(NEC-500-7)

Those areas in which there are easily ignitable fibers or flyings present, due to type of material being handled, stored, or processed.

#### TYPICAL CLASS I LOCATIONS

- Petroleum refineries, and gasoline storage and dispensing areas.
- Industrial firms that use flammable liquids in dip tanks for parts cleaning or other operations.
- Petrochemical companies that manufacture chemicals from gas and oil.
- Dry cleaning plants where vapors from cleaning fluids can be present.
- Companies that have spraying areas where they coat product with paint or plastics.
- Aircraft hangers and fuel servicing areas.
- Utility gas plants, and operations involving storage and handling or liquefied petroleum gas or natural gas.

#### TYPICAL CLASS II LOCATIONS

- Grain elevators, flour and feed mills.
- Plants that manufacture, use or store magnesium or aluminum powders.
- Plants that have chemical or metallurgical processes, producers of plastics, medicines, and fireworks, etc.
- Producers of starch or candies.
- Spice-grinding plants, sugar plants and cocoa plants.
- Coal preparation plants and other carbon-handling or processing areas.

### GROUPS

(NEC-500-3)

The gases and vapors of Class I locations are broken into four groups by the code: A, B, C, and D. These materials are grouped according to the ignition temperature of the substance, its explosion pressure and other flammable characteristics. The dust locations of Class II are designated E, F, and G. These groups are classified according to the ignition temperature and the conductivity of the hazardous substance.

NOTE: For detailed group descriptions refer to NEC-500-3.

#### TYPICAL CLASS III LOCATIONS

- Textile mills, cotton gins, cotton seed mills and flax processing plants.
- Any plant that shapes, pulverizes or cuts wood and creates sawdust or flyings.

\* WARNING: Explosion-proof blowers must be used with statically conductive ducting.

# VENTURI BLOWERS

*Our Venturi Blowers are a perfect solution to moving air in refineries, utility and power plants, shipyards, paper and pulp plants, marine and steel industries, and manhole operations.*

Use our Venturi Blowers to remove poisonous, explosive, or hazardous fumes from confined spaces such as process towers, tanks, and large pipes. You can cool workers in elevated temperature conditions, or cool heavy equipment that may be in danger of overheating with a blast of directed air. Our line of high-performance, lightweight Venturi Blowers helps to create a safe, healthy working environment leading to greater efficiency and productivity. Welding fumes, hot air, gases, and smoke can all be removed quickly and easily while our Venturi Blowers can also be used to move fresh air into a manhole.

## OPERATION

Compressed air or saturated steam is the power source for our Venturi Blower line. Small volumes of high-velocity air (from the compressed air source) run through the casting and out the nozzle jets, creating a venturi action or pulling action that creates large volumes of air through the venturi and out the air diffuser.

A 1" to 1½" hose with a "crows foot" connection is recommended from your air supply source to the side inlet connection. The compressor size required can be determined by checking the chart on air consumed at various inlet pressures. Operate this Venturi Blower on air or steam lines limited to 140 psi.

- ▷ Choose from Metal or Anti-Static Plastic Linear
- Low-Density Polyethylene (LLDPE)
- ▷ Lightweight construction
- ▷ Convenient carry handles for one-person portability to any location
- ▷ No guards required
- ▷ Multiple inlet ports
- ▷ Sturdy steel galvanized steel diffuser
- ▷ All models include a crow's foot inlet connection
- ▷ Static ground wire is attached to the base of all blowers (for use in hazardous locations)
- ▷ Single-piece cast aluminum inlet housing

|--|--|---|---------------------|----------------------------------|-----------|
|  | HEPA Main Filter                         | The highest efficiency filter available, HEPA filters are primarily used in applications where weld fumes are most harmful. We recommend for use when welding on stainless steel, as the process emits Hexavalent Chromium.   | 99.97% @ .3 microns | 12" x 12" x 11.5"<br>15 lbs.     | 9450-FHE  |
|  | 95% Main Filter                          | A highly efficient filter, 95% filters are used with effective results in most welding applications. We advise using a 95% filter when welding on carbon and galvanized steel.  | 95% @ 5 microns     | 12" x 12" x 11.5"<br>15 lbs.     | 9450-F95  |
|  | Pleated Pre-Filter (6/pkg)               | The Allegro pre-filter is used to capture large particles of metal dust and dirt found in weld fumes, passing the smaller particles on to the main or HEPA filter. Replacing this filter as indicated by the extractors filter status light will help ensure maximum life of the main or HEPA filter.                                   | 40% @ 5 microns     | 11.75" x 11.75" x .75"<br>2 lbs. | 9450-PF   |
|  | Specialty Aluminum Mesh Oil Pre-Filter   | This pre-filter is used as an alternative to the standard pleated pre-filter (9450-PF) and is used to capture oil mist present in some weld applications. Cleaning this filter after each use will help ensure maximum life of the main or HEPA filter.   | *                   | 11.75" x 11.75" x .75"<br>2 lbs. | 9450-AM   |
